## Introduction and Explanations

The profiling**values** report is a scientific document to optimize staffing and career development. It describes interests and skills of individuals and gives precise suggestions for further improvement and development.

When corporations decide to utilize these interests and skills fully, employer and employee will benefit alike.

All information in the profiling**values** report is collected from an online questionnaire. profiling**value**'s scoring technique is based on the value psychology and determines the deviations from a logic-mathematical norm. This allows a joint and objective display of interests and skills.

The personal value system is considered to be the most stable behaviour norm in humans. If you are interested to find out more about the psychological or technical aspects of our diagnostic tool, kindly request the documents directly from us ([info@profilingvalues.com](mailto:info@profilingvalues.com)).

The profiling**values** tool complies with all scientific standards for psychometric instruments such as validity and reliability. profiling**values** is valid against other methods such as the Catell 16PF.

If you are interested to find out more about the scientific aspects of our diagnostic tool, kindly request the documents directly from us ([info@profilingvalues.com](mailto:info@profilingvalues.com)).

profiling**values** is based on the scientific work of Dr. Robert S. Hartman and was developed by Dr. Ulrich Vogel.

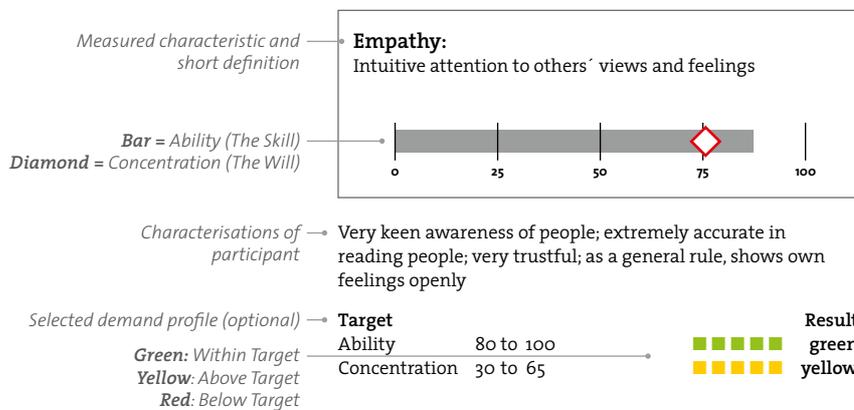

## General instructions to interpret the test results

Altogether, 12 character traits in two parameters – the ability as well as the willingness to use the ability – are displayed. Each character trait is displayed in a separate figure. In the back of the report, readers also find a summary page covering all characteristics.

In case you provided us with a job description, all results are in reference to the specific job description. profilingvalues extracts the individual requirements and translates them into a numerical target corridor. You will find these numbers separately below each figure. In case the analysis was done without a specific job profile, replacement characters (x, y) are displayed respectively.

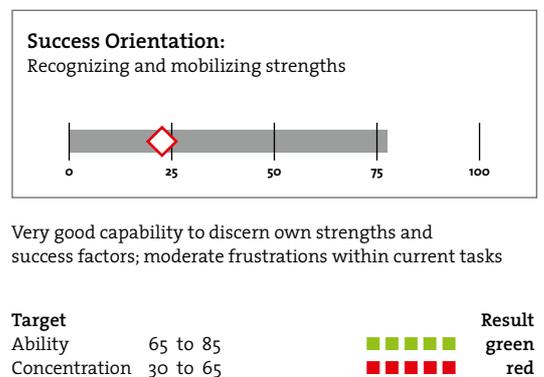

### Example 1

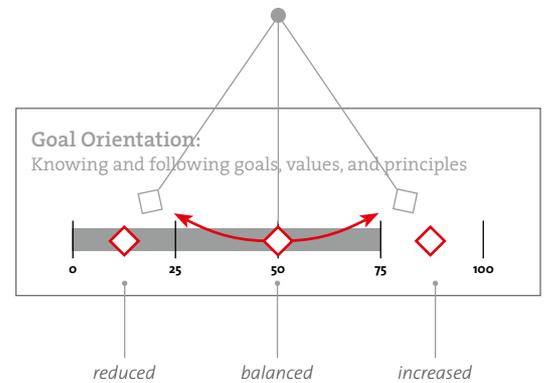

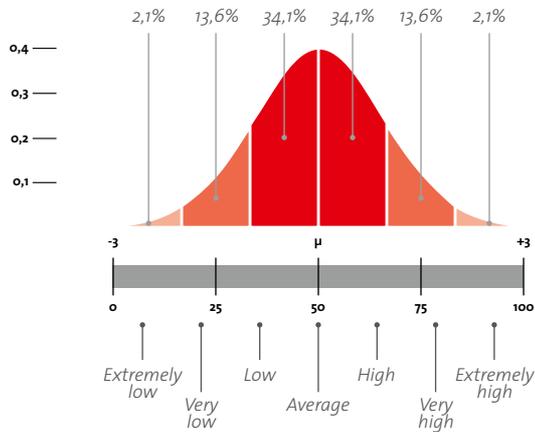

#### High Ability and Will

### Example 2

#### High Ability and Low Will

## Interpreting the bars

The bars represent the ability or skill of a person in a certain field. The profilingvalues scales are calibrated to show the normal distribution within a population as can be seen in the figure above.

## Interpreting the diamonds

The diamonds represent the willingness of an individual to use a certain ability. Their basic position is at 50%. This means: The use of a skill is situational and balanced.

A diamond about up to 15% above or below the basic position signifies flexibility regarding the usage of the competency.

A high score towards 100% signals high attention towards a skill – i.e. high willingness, possibly even compulsion (90-100%). This implies also the ability of a person to steer this character trait is decreasing. The combination of high ability and high willingness shows passion to use a skill.

A low score towards 0% signals little attention to use a skill and possibly even disregard (0-10%). In this situation too, the conscious ability to steer a quality is decreasing.

Interesting is the combination of very high skill (bar) and very low willingness (diamond). In these instances we speak of an unconscious competence. It does not need focus to unfold but can be utilized more intentionally.

Lower diamonds are not „bad“. They are more or less beneficial regarding specific tasks or functions.
